Author Index to Volume 26

In this index are listed names of authors and titles of their articles and notes. Abstracts of papers read at meetings are designated by the letter (A) after the number of the page on which the abstract may be found. Papers read at meetings for which an abstract has not been published are not included; however, they are indexed in the Analytical Subject Index. The symbol (L) after an entry signifies a Letter to the Editor.

Adams, Sam. (see Colmer, Mary W.)—397
Adler, C. On the humanization of some physics problems—42(L)
Ainslie, D. S. Electrostatic device for charging electroscopes—582
——Demonstration experiments in electrostatics—50(A), 549
——Measurement of the earth's magnetic field for the Bainbridge e/m experiment—496
Alford, W. Parker and Albert Gold. Laboratory measurement of the velocity of light—481
Allen, Joseph. (see Correll, Malcolm)—421(A)
Anderson, William R. Study of the more significant experiments and equipment used in the introductory electricity and magnetism course—133(A)
Andrews, C. L. Review of *Microwave measurements*—271
Arnold, D. L. (see Schoepfle, G. K.)—419(A), 537
Askovitz, S. I. Centroids of negative masses and weighted vectors—419(A), 610
——Centroids, vectors, and least squares—164
Axelrod, Harry I. Fast neutron scintillation spectrometer—589(A)

Bacon, Ralph Hoyt. Coupled oscillators and servomechanisms—403(L)
——Inelastic collisions "of the second kind"—585(L)
——On the paradox of the twins—502(L)
Bailey, C. L. Free experiments in an elementary laboratory—345(A)
Baker, John H. Meeting of the Michigan Section—507
Band, William. New look at von Neumann's operator method in quantum statistics. I—440, II—540
Barnes, George. Liquid rope-coil effect—419(A)
——Meeting of the Northern California Section—344
——Review of *Analytical mechanics*—597
——Study of collisions. Part I. Survey of the periodical literature—5; Part II. Survey of the textbooks—9
——Untapped source of potential scientists—245
——, **J. W. Patmore, and S. J. Fountain.** Classification of collisions; elastic collisions on a macroscopic scale—122
——**and J. R. Grammer.** Surface tension experiment—190
——**and Richard Woodcock.** Liquid rope-coil effect—205, 344(A)
Barr, E. Scott. Anniversaries in 1958 of interest to physicists—104
——Noteworthy anniversaries during the year 1957—135(A)
——Origin and development of American journals for physicists—505(A)
Barrett, Joseph J. Ionization chamber for the measurement of gamma-ray dose rates—407(A)
Bartlett, Albert A. Basic experiment in radiological physics—281
Bartunek, Paul F. That confounding half—591(A)
——The spirit giveth life—296
Basri, Saul A. On the formulation of the nonrelativistic classical laws of mechanics—587(A)
Benfield, A. E. Note on precession—396
Bennett, Donald M. Teaching laboratory without a manual—135(A)
Benzie, Don. Mass education with films—200(A)
Bertsch, Carl V. and Bernard A. Greenbaum. New apparatus for Snell's law—340
Bettler, P. C. Activation energy for the surface migration of tungsten—203(A)
Bhatia, A. S. (see Trikha, S. K.)—193
Billings, J. Robert, J. Bruce Davis III, Daniel T. Goldthwaite, Margery J. Kelz, Henry J. Krauser, Raymond W. Rowan, and Lee E. Wickline. Introductory physics on film—Section on mechanics—510
Blatt, Frank J. Review of *The calculation of atomic structure*—135
Borneas, M. Observations in relation with a new system of units—40
Bradford, James M. (see Edwards, Ray L.)—399
Bradley, George E. Simple pulse-height analyzer for instructional use—641
Brady, J. J. Dielectric breakdown in gases at microwave frequencies—409(A)
Bray, Edmund. Integrated two-year sequence in physical science at St. Paul Academy—134(A)
Brieske, Phillip R. Examination problem on Kepler's third law—404(L)
Brock, E. G. (see Sleeth, J. D.)—203(A)
Broersma, S. Principles of servomechanisms—43
Brown, F. C. Photoconductivity in the silver halides—201(A)
Brown, F. W. Radio propagation research at the National Bureau of Standards—628
Brown, Sanborn C. Do college students benefit from high school laboratory courses?—334
Brown, Sheldon. Review of *Basic physics*—650
Brown, Thomas B. Elliptic polarimeter for the student laboratory: "specimens" of elliptically polarized light—183
——Self-induction: a demonstration—422(A)
Bruening, Leonard F. Heat of sublimation of dry ice—397
Brummond, Robert J. Our contribution to the science teacher shortage—345(A)
Bruner, H. D. Physics and medical research—307
Buchta, J. W. New era in science?—352
Bueche, F. J. and S. W. Harding. Method for determining molecular weight distribution in high polymers—590(A)
Burlingame, Frank and R. N. Keller. Pulse height technique for determining relative efficiency for liquid solution scintillators—589(A)
Butt, James Douglas. Air Force Institute of Technology subcritical assembly—591(A)

Calfee, Robert F. Meeting of the Colorado-Wyoming Section—587
Callen, Earl. Further comments on "Electrostatic potential in crystals"—34
Carney, Rose A. Study of ferromagnetic material—506(A)
Carr, Howard. Meetings of the Southeastern Section, American Physical Society—134, 504
Carr, J. A. Projection systems for use in demonstrations—345(A)
Carr, Joseph. Open air alpha counter—646(A)
Charbonnier, Francis M. Some applications of the field emission cathode in electron optics—409(A)
Ch'en, Shang Yi. Some considerations about the precision of the international standard of wavelength—203(A), 464
Christy, R. W. Distribution of scores in examinations of finite length—324
——**and L. M. Rieser, Jr.** Modification of Rüchardt's experiment—37
Clancy, Edward P. "Do-it-yourself" measurement of surface tension—341
——Interdepartmental course on atomic energy—49(A)
Cleveland, E. L. Observations on a wet roadway—198(L)
Cohn, Byron E. (see Forgrave, Edward Paul)—591(A)
——(see Green, John L.)—588(A)
Colmer, Mary W. and Sam Adams. Some characteristics of the literature used by *American Journal of Physics* authors—397
Coon, J. H., R. W. Davis, and H. E. Felthauser. Elastic scattering of 14-Mev neutrons—202(A)
Correll, Malcolm and Joseph Allen. Apparatus for determining the mechanical equivalent of heat—421(A)
——(see Worrell, Francis T.)—607
Cowen, J. A. and W. H. Tanttila. Versatile magnetic resonance spectrometer—381
Crawford, Frank S., Jr. Mnemonic device for relativistic particle kinematics—376
Crawford, Roger C. (see Hilton, Wallace A.)—129, 371, 400
Creutz, E. Review of *The elements of classical thermodynamics*—651
Cullen, Thomas L. Radioactivity of the air by the filter method—420(A)
Curtis, G. W. and D. K. Watson. Relative intensities of λ3888.6 (He) and λ3889 (H) in solar prominences—588(A)
Custer, Brice C. Determination of thermal expansivity of zirconium hydride—590(A)

Dangle, Richard L. Simple Geiger counter—587(A)
Daniels, Theodore C. General physics course at Gettysburg College—407(A)
David, A. Beware of the "glug," a new unit of mass—41(L)
Davis III, J. Bruce (see Billings, J. Robert)—510
Davis, R. W. (see Coon, J. H.)—202(A)
Day, John A. Report on an experiment in individualization of teaching—267
Dempsey, Daniel F. Measurement of the capillary curve—89
Deshotels, Warren J. Units and dimensions for the Hall coefficient—401

Dewdney, John W. Simple pendulum equivalent to spring-mass system—340
Dickinson, W. C. (see Soemitro)—316
Dietrich, Verne E. Demonstrating phase relations between voltage and current—506(A)
——Integrated course in general physics—506(A)
Dimond, James (see Hastings, R. B.)—645(A)
Dittrich, William J. Meeting of the Washington Section—507
Dodd, J. G. Determination of g by a bouncing ball—268

Wu, Ta-You. Laws of conservation: parity and time reversal—568

Youtz, B. Antineutron experiment—202(A)

Zatzkis, Henry. Thomson atom—635
Zemach, C. Review of *The spectrum of atomic hydrogen*—598
Zinnes, I. I. Hidden variables in quantum mechanics—1
Zorn, Jens C. Shorthand for electrical schematics—38

Analytic Subject Index to Volume 26

In this index are listed titles of articles and notes, together with the names of their authors. Classification is based upon analyses of contents of the articles, rather than upon titles alone. The symbol (A) designates an abstract of a paper read at a meeting; (T) signifies title only, and (L) designates a Letter to the Editor.

To facilitate reference to any desired subject, this index is divided into sections arranged alphabetically. The titles of these sections are as follows:

Accelerators
Aerophysics
American Association of Physics Teachers
Apparatus
Astrophysics
Biophysics
Courses
Demonstrations
Department administration, maintenance, and activities
Education, physics and science
Electricity and magnetism
Employment of physicists
Experiments
General physics, educational aspects
General physics, instructional techniques
Geophysics
Governmental and industrial research
Heat and thermodynamics
History and biography
Laboratory arts and techniques
Laboratory organization and operation
Light
Mathematics
Mechanics, classical
Mechanics, quantum
Microwaves
Modern physics
Nuclear physics
Philosophy of science
Properties of matter
Radio and television
Relativity
Reports, announcements, and news
Rockets
Secondary school physics
Social and economic aspects of science
Solid-state physics
Sound
Teacher training
Testing, theory and techniques
Textbooks
Units, dimensions, and terminology
Visual materials and methods
X-rays

Accelerators

Low budget research program with a Cockroft-Walton accelerator, B. J. Hackfield, B. L. Lamb, and J. C. Young—410(T)
Role of accelerators and reactors in research, Gerald Tape—507(T)

Aerophysics

Atmospheric electric measurements over the ocean, Richard I. Weller—406(A)
Radioactivity of the air by the filter method, Thomas L. Cullen—420(A)

American Association of Physics Teachers

American Association of Physics Teachers—234, 489
American Journal of Physics, Report of the Editor for the year 1957, Thomas H. Osgood—429
Annual business meeting, Mosaic Room, Hotel New Yorker, February 1, 1958—428
Committees for 1958—422
Committee on apparatus—43, 44, 204, 311, 411, 417(T), 513, 604
Minutes of the annual meeting of the council, Frank Verbrugge—424
Necrology: John Christian Jensen, 1880–1957—343; Leonard R. Ingersoll—357
New Members of the Association—47, 136, 273, 346, 414, 513, 600
Oersted Medal—Presentation of J. W. Buchta as the Oersted Medalist for 1957, Walter C. Michels—350; Address: New era in science? J. W. Buchta—352, 418(T)
Report of the AAPT Committee on Apparatus for Educational Institutions, W. C. Kelly—311; 493
Richtmyer Memorial Address—Approximate nature of physical symmetries, P. Morrison—358, 418(T)
Section News: Appalachian, Stanley Farr—200; Central Pennsylvania, Joseph P. Harper—406; Chesapeake, Bernard B. Watson—327, John R. Smithson—269, 505; Chicago, Richard T. O'Connor—132, 200, 506; Colorado-Wyoming, Robert F. Calfee—587; Illinois, Lyle W. Finley—201; Indiana, Francis T. Worrell—507; Michigan, John H. Baker—507; Minnesota, George R. Stubbs—133, 345, 645; Northern California, George Barnes—344; Oregon, Larry Schecter—202, 409; Texas, C. M. Loyd—410; Washington, Martin E. Nelson—270, William J. Dittrich—507; Western Pennsylvania, B. G. Kolossvary—407, Roland L. Heid—587
Summer meeting of the Association—318
Summer meeting, Schenectady, June 20–22, 1957, program and abstracts, Harald C. Jensen—48
Sustaining members—523
Tape recording of the 1958 Richtmyer Memorial Lecture—238, 484
Twenty-seventh annual meeting, New York, January 30–February 1, 1958, program and abstracts, C. J. Overbeck—415

Apparatus

Accurate indicating spherometer, M. Eugene Rudd—645(A)
Advanced laboratory project: construction of a Wilson cloud chamber, Raymond L. Tanner—12
AEC grants to educational institutions for purchase of certain kinds of equipment—493
Aerodynalog, No. A-1, Raymond J. Seeger—411
Air Force Institute of Technology subcritical assembly, James Douglas Butt—591(A)
An apparatus competition—604
Beta-ray spectrometer for second-year physics, Donald Olson—134(T)
Calibrated torsion pendulum for moment of inertia measurements, Ralph E. Green—498
Cavendish balance, Arthur G. Rouse—503(L)
CO_2 electrostatic generator, S. Mascarenhas, F. Gambirasio, and Y. Mascarenhas—563
Coupled oscillators and servomechanisms, Ralph Hoyt Bacon—403(L)
Current balance, Charles Williamson—204
Demonstration of some inexpensive laboratory equipment, Henry J. Rozycki—270(T)
Design and application of a small analog computer, Harvey M. Lashier—419(A)
Design and uses of a light-water-moderated subcritical assembly, E. W. McDaniel and T. A. Elliott—168
Device for the automatic sampling of continuously varying phenomena of discrete events, Larry Gatterer—591(T)
Device for the measurement of isomeric half-lives in the millisecond range, I. E. Lindstrom—409(A)
Electric field-mapping apparatus, L. A. Sanderman—513
Electrostatic device for charging electroscopes, D. S. Ainslie—582
Elliptic polarimeter for the student laboratory: "specimens" of elliptically polarized light, Thomas B. Brown—183
Experiments with condensers, S. W. Leifson—239
Fast neutron scintillation spectrometer, Harry I. Axelrod—589(A)
Improvised high-resistance ac voltmeter, S. W. Leifson—344(A), 583
Improvement of the Leybold velocity of light apparatus, Marcus N. Mainardi—504(L)
Induction compass, Edward Paul Forgrave and Byron E. Cohn—591(A)
Inexpensive apparatus for the experiment on centripetal force, Lloyd B. Ham—401
Inexpensive Boyle's law apparatus, David E. Moe—35
Ionization chamber for the measurement of gamma-ray dose rates, Joseph J. Barrett—407(A)
Lecture demonstration equipment, R. W. Kenworthy—270(T)
Leybold apparatus for measuring the velocity of light by means of a rotating mirror, Eric D. Thompson—44
Low-voltage tungsten point field emission electron gun, J. D. Sleeth and E. G. Brock—203(A)
Masers and atomic clocks, Charles H. Townes—407(A)
Measurement of small dc potentials from low-power sources, M. Ferreira de Souza and S. Mascarenhas—193
Miniature scintillation-type radiation head, Y. T. Sihvonen—195
New apparatus for Snell's law, Carl V. Bertsch and Bernard A. Greenbaum—340
New demonstration motor, Harald C. Jensen—200(T)
New version of Edwards' ampere balance, Charles Williamson—577
Open air alpha counter, Joseph Carr—646(A)
Outlook for improved apparatus, W. Kelly—417(T)
Principles of servomechanisms, S. Broersma—43
Self-operating Rosa curve tracer, L. F. Marinaccio—587(A)
Simple analog computer using Ohm's law, James S. Newcomb—346(A)
Simple Geiger counter, Richard L. Dangle—587(A)
Simple inertia balance suitable for quantitative measurements, Ray L. Edwards and James M. Bradford—399

Simple pulse-height analyzer for the nuclear physics laboratory, George Bradley—270(T); for instructional use, George E. Bradley—641
Spectrometer for elementary work, W. L. Mouton—581
Study of apparatus for the teaching of physics, W. C. Kelly—311
Versatile magnetic resonance spectrometer, J. A. Cowen and W. H. Tanttila—381
Young's modulus apparatus, W. H. Michener—409(T)

Astrophysics
Application of masers to radioastronomy, Charles H. Townes—407(A)
Nova outburst—the transition stage, Stuart Pottasch—588(T)
Problems in the physics of meteors, E. J. Öpik—70
Prominences in solar magnetic fields, Hollis Johnson and Donald E. Billings—588(T)
Relative intensities of λ3888.6 (He) and λ3889 (H) in solar prominences, G. W. Curtis and D. K. Watson—588(A)
Steady-state theory at Chicago, Richard Schlegel—601

Biophysics
Basic experiment in radiological physics, Albert A. Bartlett—281
Chemical and physical contributions to developments of diagnostic radiology, Walter Whitehouse—507(T)
On the strength of insects, R. Stuart Mackay—499
Review for the physics teacher of recent work on the relation between radiation disordering and the aging process, C. C. Sartain—135(A)
Use of P^{32} in preparing radioautographs, R. B. Hastings and James Dimond—645(A)

Courses
Concept of energy as the theme of a general education course in physics, R. B. Lindsay—290
General education courses in physics, J. Gordon Stipe, Jr.—505(T)
General physics course at Gettysburg College, Theodore C. Daniels—407(A)
Integrated course in general physics, Verne E. Dietrich—506(A)
Integrated two-year sequence in physical science at St. Paul Academy, Edmund Bray—134(A)
Interdepartmental course on atomic energy, Edward P. Clancy—49(A)
New physics program for engineering students with increased modern physics, J. G. Potter—410(T)
Physics and the premedical student, Robert Lagemann—301
Physics of infrared radiation—257(T)
Proposed empirical physics course, C. F. Stickney and P. S. Signell—407(A)
Summer course in fundamentals of atomic energy for high school science teachers—138
Summer session course in demonstration experiments for high school physics teachers, Julius Sumner Miller—477
Unified approach to physics at the university level, J. R. Shepanski, H. F. Pollard, and L. G. Parry—179

Demonstrations
Automatic Cartesian diver, R. Stuart Mackay—403(L)
Balance barometer, John B. Hart—199(L)
Boat driven by thermal oscillations, R. Stuart Mackay—583
Cyclotron, demonstrating the principle of, Julius Sumner Miller—503(L)
Demonstration experiments, Eric M. Rogers—421(A)
Electrostatics, demonstration experiments in, D. S. Ainslie—50(A), 549
Electrostatics, demonstrations in, Gilbert O. Spencer—269(L)
Explaining radio detection of the earth satellite, Wallace A. Hilton and Roger C. Crawford—129
Interesting acceleration process, demonstration of, Walter R. Raudorf—49(A)
Large one-dimensional kinetic theory model, H. M. Waage—420(A)
Observation of motions relative to a rotating coordinate system, Richard M. Sutton—421(A)
On demonstrating the photoelectric effect, Julius Sumner Miller—421(A)
Physics in a toy auto, Julius Sumner Miller—132(L)
Physics in a toy boat, Julius Sumner Miller—199(L)
Physics of the dunking duck, Julius Sumner Miller—42(L)
Pin-hole camera, demonstrations with, George M. Koehl—506(T)
Projection systems for use in demonstrations, J. A. Carr—345(A)
Self-induction: a demonstration, Thomas B. Brown—422(A)
Simple demonstration for ac circuit phenomena, L. A. Youngman—410(T)
Some Texas additions to the six simple machines, and the boomerang, a neglected gyroscope, Newton Gaines—410(T)
Some unusual demonstrations with collision balls, J. H. Haynsworth—200(T)
Sputnik, demonstration of, Julius Sumner Miller—644(L)
Unwinding a spool, Gordon M. Martin—194
Use of synthetic materials to demonstrate some effects caused by electrostatic fields, Leonard Eisner—644(L)
Vibration and wave motion, demonstration experiments in, Lloyd Morris—134(T)
Voltage and current, demonstrating phase relations between, Verne E. Dietrich—506(A)
Weightlessness of a freely-falling body, R. J. Stephenson—404(L)

Department administration, maintenance, and activities
New physics laboratory and nuclear reactor at Colorado State University, Louis R. Weber—419(A)
Tours of the University of Washington nuclear physics laboratories, cosmic ray laboratories, and examination of displays of interesting lecture demonstration equipment—508(T)

Education, physics and science
Activities of the physical science study committee, Elbert P. Little—269(T); John Marean—344(T)
Additional remarks on the physical sciences study committee, J. B. Gerhart—507(T)
AIP activity in education, Grant O. Gale—200(A)
Can industry assist in advanced technical education? Fred B. Haynes—505(A)
Chemistry and the atomic nucleus, Willard F. Libby—524
Developments and responsibilities in education in the sciences, Thomas D. Reynolds—134(T)
Educational activities of ORINS from the high school to the graduate school level, William G. Pollard—134(T)
Evaluation of science fairs, Clarence P. Welty—201(T)
General science: an opportunity, W. M. Pierce—420(A)
Motivation for science careers, Irving Langmuir—49(T)
New era in science? J. W. Buchta—352, 418(T)
On teaching thermophysics, Raymond J. Seeger—248
Opportunities and responsibilities in science education, Thomas D. Reynolds—330
Physics and medical research, H. D. Bruner—307
Physics and the medical student, Peter A. Stewart—304
Physics education in Germany, Brazil, and Pakistan, Wolfgang Weber, Ernest Hamburger, and Ali Beg—409(T)
Place of a course in physical science in the curriculum, Carl E. Adams, Aaron Sayvetz, and Malcolm Correll—507(T)
Program of the physical sciences study committee, K. E. Davis—507(T)
Relation of school and college physics, H. Craig Sipe—134(A)
Review and criticism of science and physics education in colleges, Boyd C. Mills—270(T)
Review and criticism of science and physics education in Europe, Hans Bichsel—270(T)
Role of physics at the Air Force Academy, Bennett E. Robertson—591(A)
Role of research and industry in the training of engineers, Eugene Stolarik—134(A)
Some techniques of teaching secondary chemistry, James S. Crocker—410(T)
Teaching physics in court, John A. Karas—421(A)
Untapped source of potential scientists, George Barnes—245
What should we do with our gifted freshmen? C. R. Scherer—410(T)

Electricity and magnetism
Ampere's law and the vector potential, S. J. Raff—454
Atmospheric electric measurements over the ocean, Richard I. Weller—406(A)
Bridges, trees, polyhedra, and electric circuits, Chester Page—589(A)
Calculation and calibration of a linear gradient in a magnetic field, James H. Simpson, Jr.—406(A)
Calibration of ballistic galvanometers for magnetic measurements, Bernard L. Miller—129
Comments on "Electrostatic potential in crystals," Wayne B. Nottingham—33; Further comments, Earl Callen—34
Criterion of convergency for feedback circuits, Kozaburo Miyakawa—588(A)
Effects of time-varying impulses on a ballistic galvanometer, David D. Woodbridge and W. R. Varner—490
Electricity twenty miles up, Karl Martinez—134(T)
Electron magnetic resonance absorption spectra of free radicals, H. N. Rexroad—200(T)
Field of a linear electrostatic multipole, L. Jackson Laslett—402
Fundamentals of voltage multiplier rectifier circuits, Richard C. Hitchcock—407(A)
Graphical aspects of the circuit equation, Harald C. Jensen—49(A)
Graphical presentations of the circuit equation, Harald C. Jensen—133(A)
Influence of light upon the magnetization of massive iron, H. E. Stauss—551

Introducing mutual and self inductance rigorously, Robert W. Estin—500, 506(A)
Means for objectifying electronics principles, Charles W. Woodfield—506(T)
Measurement of small dc potentials from low-power sources, M. Ferreira de Souza and S. Mascarenhas—193
Method of images—a special case, Bernard L. Miller—131
Negative resistance, R. Stuart Mackay—60
New approach to the teaching of electrostatics in general physics courses, J. Rekveld—139
On the definition of **B**, J. Mayo Greenberg—196
Operating curves for single-phase rectifiers, Richard C. Hitchcock—587(A)
Phantastron circuit for separating two flash discharges, John L. Green and Byron E. Cohn—588(A)
Shorthand for electrical schematics, Jens C. Zorn—38
Some applications of the field emission cathode in electron optics, Francis M. Charbonnier—409(A)
Some effects of turbulence on electrolytic conduction, Donald A. Cowan and J. H. Brown—410(T)
Study of the more significant experiments and equipment used in the introductory electricity and magnetism course, William R. Anderson—133(A)
Use of negative impedance in circuit design, C. H. Macpherson—202(A)
Vacuum electrodynamics on a merry-go-round, John Ise and Jack L. Uretsky—431

Employment of physicists
New look at the manpower problem, Charles A. Hachemeister—192
Summer employment for physics college students and high school science teachers—4

Experiments
Antineutron experiment, B. Youtz—202(A)
Basic experiment in radiological physics, Albert A. Bartlett—281
Beta-ray reflection, experiment on, Angus Gillis—345(A)
Breakfast egg, John Satterly—341
Circuit theorems, experiment on, J. G. Tillotson—130
Condensers, experiments with, S. W. Leifson—239
Conservation of angular momentum, experiment on, Richard M. Sutton—580
Determination of g by a bouncing ball, J. G. Dodd—268
Determining the mechanical equivalent of heat, apparatus for, Malcolm Correll and Joseph Allen—421(A)
"Do-it-yourself" measurement of surface tension, Edward P. Clancy—341
Elementary experiment in deriving an empirical relationship, Francis T. Worrell and Malcolm Correll—607
Graphical analysis of the moment of inertia experiment, F. W. Van Name, Jr.—406(A), 605
Heat of sublimation of dry ice, Leonard F. Bruening—397
Intermediate laboratory, experiments in, O. Rex Ford—200(T)
Laboratory measurement of moment of inertia, Roland L. Heid—408(A)
Laboratory measurement of the velocity of light, W. Parker Alford and Albert Gold—481
Measurement of galvanometer resistance, Bernard L. Miller—640
Measurement of the capillary curve, Daniel F. Dempsey—89
Measurement of the earth's magnetic field for the Bainbridge e/m experiment, D. S. Ainslie—496
Measuring the acceleration of a ballistic pendulum with a U-effect accelerometer, Robert G. Packard—410(T)
Measuring the coefficient of restitution, experiment for, F. W. Van Name, Jr.—386
Method for measuring rise and decay times, Thomas A. Harwood and Olan E. Kruse—191
Modification of Rüchardt's experiment, R. W. Christy and L. M. Rieser, Jr.—37
Modified form of simple pendulum, experiments with, J. W. Fox—559
Modified helical method for determining e/m, Bernard L. Miller—421(A)
Nonorthogonal forces and Lissajous figures, Dan McLachlan, Jr.—496
Note on the measurement of e/m by the Hoag method, Soemitro, Susilo Prawirowardojo, and W. C. Dickinson—316
Nuclear experiments for elementary physics, Cicero Bernard—410(T)
Sophomore experiment in thermoelectricity, J. H. Noon and B. J. O'Brien—373
Spirit giveth life, Paul F. Bartunek—296
Statics and dynamics of a helical spring, Ronald Geballe—287
Student experiments with the ORSORT subcritical reactor, H. Pomerance and A. Robeson—135(A)
Study of ferromagnetic material, Rose A. Carney—506(A)
Surface tension experiment, George Barnes and J. R. Grammer—190
Two improved methods for determining Young's modulus, Ralph E. Green—258
Use of a sine potentiometer in elementary electronics experiments, D. T. Roberts—50(A)

General physics, educational aspects
Activities to meet present physics teaching problems, C. J. Overbeck—133(A)
Aristotle and the physics student, John K. Wood—175
Basic undergraduate physics preparation, Glenn Q. Lefler—39
Correlation of high school and college grades, G. K. Schoepfle and D. L. Arnold—419(A), 537

General physics, instructional techniques
Comments on the physical science study committee, W. H. Michener—587(A)
Electronic plastic blocks—a fresh approach on teaching electronics in a science program, Morris Tsichler—506(T)
Handling larger sections in courses in general physics for engineering and science students, Marsh W. White—407(A)
New approach to the teaching of electrostatics in general physics courses, J. Rekveld—139
New teaching aid: flow graphs, William W. Happ—345(A)
On the humanization of some physics problems, C. Adler—42(L)
On the teaching of "standing waves," J. Rekveld—159
On writing up demonstrations—a teaching adventure, Julius Sumner Miller—586(L)
Optimum size of recitation sections in general physics courses, Marsh W. White—408(A)
Partial truths, Thomas D. Phillips—502(L)
Phase-plane graphics—a new approach to teaching dynamics, Leo S. Packer and Norman S. Eiss—91
Practical aids for physics teachers—59, 329
Report on an experiment in individualization of teaching, John A. Day—267
Revisions in the engineering general physics course, T. R. Palfrey, R. R. McLeod, and J. W. MacKay—507(T)
Symmetry and conservation in introductory physics, William C. Davidon—508(T)
Systematic scaling of grades, Donald H. White—643
Teaching technique leading to thought, Leonard W. Himes—506(T)
Teaching thermophysics, R. J. Seeger—49(T)
That confounding half, Paul F. Bartunek—591(A)
Thinning out the freshman course, Alfred Romer—50(A)

Geophysics
International Geophysical Year, Gladys Hawthorne—589(A)
One good tern deserves another, Richard M. Sutton—639

Governmental and industrial research
International cooperation in physics—275
Past and present relations of science and government in the United States, H. D. Smyth—418(T)
Physics research near Argonne's reactors, Francis E. Throw—507(T)
Pure research sponsored by the Office of Naval Research, Walter E. Peterson—200(T)
Radio propagation research at the National Bureau of Standards, F. W. Brown—628
Some recent trands in applied research in aeronautics, Seville Chapman—49(T)
Support of research published in *The Physical Review*—135(A)
Tools of automation, Jon J. McNeil—408(T)

Heat and thermodynamics
Air thermometer and Kelvin zero, Willard L. Erickson—590(A)
Determination of thermal expansivity of zirconium hydride, Brice C. Custer—590(A)
Elementary derivation of the multicomponent diffusion equation, F. A. Williams—467
Measurements of thermal conductivity at high temperatures, George J. Growe—408(A)
New methods for attainment of extremely low temperature, J. C. Wheatley—201(A)
Note on a problem concerning the Gibbs paradox, Martin J. Klein—80
On teaching thermophysics, Raymond J. Seeger—248
Pressure-volume relations in solids, George E. Duvall—235
Solutions to some new destructive hot climate condensation problems in building wall insulation, W. R. Wollrich—410(T)
Superconductivity, Henry A. Boorse and Leon N. Cooper—416(T)
Thermal diffusion of polymer solution 3, Joe S. Ham—410(T)
Thermodynamics and statistical mechanics at negative absolute temperatures, N. F. Ramsey—416(T)

History and biography
Albert Einstein—scientist, philosopher, humanitarian, Julius Sumner Miller—344(T)
Anniversaries in 1958 of interest to physicists, E. Scott Barr—104
Newton and the cause of gravity, Melbourne G. Evans—619
Noteworthy anniversaries during the year 1957, E. Scott Barr—135(A)
Origin and development of American journals for physicists, E. Scott Barr—505(A)
Was Pierre Bouguer the "Father of Photometry"? John W. T. Walsh—405(L)

Laboratory arts and techniques
Cheap method of fabricating small thermocouples, J. A. Scanlin—410(T)
Methods of fabrication of field emission cathodes, H. W. Pitman—409(A)
Modification of a one-inch globe valve for vacuum use, Donald D. Snyder—642
Sliding and rotating mechanical and electrical feed-through seals into a vacuum, N. Fuschillo—400
Storage battery connections, Harald C. Jensen—342
Techniques for very high vacuum-applications to surface physics, R. N. Peacock—201(A)

Laboratory organization and operation
Coming June conference on laboratory instruction in general physics, Charles Williamson—408(T)
Evaluating laboratory instruction by use of objective-type tests, Haym Kruglak—31
Free experiments in an elementary laboratory, C. L. Bailey—345(A)
Improvement of laboratory instruction: a report on the AAPT Connecticut conference, M. S. McCay—505(T)
Introductory physics laboratory, Leo Nedelsky—51
Laboratory courses for physics majors, Colin A. Plint—553
Laboratory instruction in general physics—306
Operating a *free* laboratory, R. B. Leighton—417(T)
Physics laboratory experiments as research problems, N. Goldowski-Renner—50(A)
Research freedom for large laboratory classes, Emerson M. Pugh—409(A)
Storrs conference on laboratory instruction, Haym Kruglak—270(T)
Teaching laboratory without a manual, Donald M. Bennett—135(A)

Light
Atmospheric absorption of infrared, M. Eugene Rude—345(A)
Color phenomena with evaporated films, A. F. Turner—416(T)
Effect of anharmonicity on intensity calculations of ultraviolet absorption bands, Ben P. Miller—410(T)
Elliptic polarimeter for the student laboratory: "specimens" of elliptically polarized light, Thomas B. Brown—183
Influence of light upon the magnetization of massive iron, H. E. Stauss—551
Magnifying powers of optical instruments, D. A. Richards—337
Molecular constants of InCl from absorption bands near 3600 angstroms, P. G. Youngner—645(T)
Observations on a wet roadway, E. L. Cleveland—198(L)
On the use of the optical path concept in the study of spherical surfaces, D. G. Douglas—14
Rotational analysis of the 3400–3900 A absorption system of sulphur dioxide, R. K. Russell—410(T)
Spectrograms in color, Harry Hill—408(A)
Speed of light on a positron-electron chain, Howard Hanson—134(A)
Thought on polarized light, Elliot Weinberg—646(A)
2000 A system of sulphur dioxide, James W. Riggs—410(T)
Where superposition fails, Moody L. Coffman—410(T)

Mathematics
Approximations for the inverse Laplace transforms, W. T. Guy, Jr.—410(T)
Comments on the use of the Dirac delta function with transform methods, James C. Bradford—410(T)
Explicit expression for spherical harmonics, L. A. Schmid—485
General formula for radius of curvature of a spherical surface with a spherometer, S. K. Trikha and A. S. Bhatia—193
Learning of engineering physics, mathematics essential to, D. B. Williamson—200(T); Douglas B. Williamson—408(A)
Mapping topology to dual in linear space, James C. Bradford—410(T)
Method for evaluating interaction integrals, A. Maradudin and G. Weiss—499
On the use of the notion "probability" in physics, T. Ehrenfest Afanassjewa—388
Reducibility of polynomials, R. L. Wilson—410(T)
The S.M.U. laboratory's Univac Scientific 1103 Computer, Paul D. Minton—410(T)
What is modern mathematics? H. J. Ettlinger—410(T)

Mechanics, classical
Centroids of negative masses and weighted vectors, S. I. Askovitz—419(A), 610
Centroids, vectors, and least squares, S. I. Askovitz—164
Classification of collisions; elastic collisions on a macroscopic scale, George Barnes, J. W. Patmore, and S. J. Fountain—122
Elliptic orbits in a frictional atmosphere, D. G. Parkyn—436; 644(L)
Force and deflection analysis of a gimbal ring in an acceleration field, Gene Grubin, William Orr, and William Love—587(T)
Induced rocking, John Satterly—625
Inelastic collisions "of the second kind," Ralph Hoyt Bacon—585(L)
Instance of Reynolds number, Arthur G. Rouse—405(L)
Liquid rope-coil effect, George Barnes—419(A); George Barnes and Richard Woodcock—205, 344(A)
Moments of inertia of plane triangles, John Satterly—452
Note on precession, A. E. Benfield—396
Note on presenting the Hamiltonian, Luigi Z. Pollara—195
On the classical laws of motion, Leonard Eisenbud—144
On the classical mechanics of the internal rotation of molecules, Chun C. Lin—319
On the flight of a golf ball, Julius Sumner Miller—344(T)
On the formulation of the nonrelativistic classical laws of mechanics, Saul A. Basri—587(A)
Phase-plane graphics—a new approach to teaching dynamics, Leo S. Packer and Norman S. Eiss—91
Simple pendulum equivalent to spring-mass system, John W. Dewdney—340
Study of collisions, George Barnes, Part I. A survey of the periodical literature—5; Part II. Survey of the textbooks—9
Study of some collision phenomena, George Barnes—344(T)

Mechanics, quantum
Explicit expression for spherical harmonics, L. A. Schmid—485
Hidden variables in quantum mechanics, I. I. Zinnes—1
Laws of conservation: parity and time reversal, Ta-You Wu—568
Meta-derivatives and anticommutators, Hans Freistadt and Ruth Rebekka Struik—461
New look at von Neumann's operator method in quantum statistics, I, William Band—440; II—540
Nonobservability in the small, William McKinley—49(T)
Parity, C. D. Swartz—49(T)
Plane rotator in a Stark field, Manuel Schwartz and Michel Martin—639
Recent advances in physics, David Park—210; Erratum—349
Simplified approach to spin in Dirac theory, H. Mendlowitz—17
Thomson atom, Henry Zatzkis—635

Microwaves
Dielectric breakdown in gases at microwave frequencies, J. J. Brady—409(A)
Electron magnetic resonance studies employing a degenerate mode cavity, John J. Faris—588(A)
Microwave generator, Bailey Donnally—646(A)
Nuclear spin echoes, Charles H. Jacobson and Burton H. Muller—590(A)

Modern physics
Recent advances in physics, David Park—210; Erratum—349

Nuclear physics
Acknowledgment, Daniel E. Lynch—406(L)
Angular distribution of the $D(d,n)He$ reaction below 1 Mev, Jack C. Fuller—410(T)
Beta-ray applicator calibration, Richard I. Weller—420(A)
Design and uses of a light-water-moderated subcritical assembly, E. W. McDaniel and T. A. Elliott—168
Elastic scattering of 14-Mev neutrons, J. H. Coon, R. W. Davis, and H. E. Felthauser—202(A)
Foundations for study of controlled thermonuclear reactions, Arthur E. Ruark—134(T)
High-energy electron scattering from nuclei with finite charge distributions, H. S. Valk—202(A)
High-energy physics, Joseph Ballam—270(T)
Investigation of gamma rays from neutron bombardment of arsenic, B. P. Foster and W. W. Givens—410(T)
L- to *K*-capture ratio in germanium-71, D. E. Rehfuss—409(A)
Monte Carlo method for computing the transmission of fast neutrons through a lead shield, Jack Thomas Humphries—590(A)
Natural radioactivity and the neutron-proton ratio, L. Muldawer—268(L); Reply, Walter C. Michels—269(L)
Neutrino physics, Clyde L. Cowan, Jr.—270(T)
Nuclear quadrupole spectroscopy, Lester C. Erich—406(A)
Parity, Raymond W. Hayward—505(T)
Parity non-conservation in hyperon decays, Fred W. Inman—410(T)
Pulse height technique for determining relative efficiency for liquid solution scintillators, Frank Burlingame and R. N. Keller—589(A)

Recent advances in physics, David Park—210; Erratum—349
Recent developments in the problem of controlled thermonuclear reactions, R. Cappe—508(T)
Relation $x+y=136$ between the nuclear and chemical stability numbers, Daniel E. Lynch—198(L)
Research using low energy charged particles, B. C. Thompson and P. M. Windham—410(T)
Role of scattering in the development of physics, J. M. Greenberg—49(T)
Rotation of elongated atomic nuclei, David R. Inglis—82
Some problems in elementary particle physics, Max Dresden—505(T)
Thermal neutron flux distribution in the CSU nuclear reactor, Lawrence N. Hadley, Jr., and E. Smith Murphy, Jr.—589(T)
Useful diagram, George D. Freier—567
Upset of parity conservation-polarization of beta rays, H. Frauenfelder—201(A)
Wave vector technique for the analysis of direct interactions, George E. Owen and L. Madansky—260

Philosophy of science
Physical theory and objective reality, Brother Romard Barthel—410(T)

Properties of matter
Analytical study of the hydrolysis of aqueous solutions of pilocarpine hydrochloride, T. S. Burkhalter—410(T)
Effects of additives on flames and explosion in acetylene, M. S. B. Munson and R. C. Anderson—410(T)
Electroluminescence and field effects in phosphors, E. G. F. Arnott—415(T)
Evidence of rupture in droplet layers on heated liquid surfaces, W. C. Levengood—35
Ferromagnetism, F. Keffer—409(T)
Increase of surface tension of certain solutions when brought into contact with hot gases, N. Skogen—25
Method for determining molecular weight distribution in high polymers, F. J. Bueche and S. W. Harding—590(A)
On the origin of inertia, Ned S. Rasor—188
Physical-chemical properties of ion-selective membranes, H. P. Gregor—410(T)
Preparation and properties of biotinyl phosphate, Sally Cauthen—410(T)
Pressure-volume relations in solids, George E. Duvall—235
Shear moduli in liquids, Rev. Charles J. Marhoefer—133(A)
Stabilization and reactions of free radicals at low temperatures, Milton D. Scheer—505(T)
Stiction, sliction, and nonlinear systems, Edward Deeds—505(T)

Radio and television
Accuracy of standard frequencies broadcast by hf radio signals, Warren C. Stickler—589(A)
Chicago public schools television instruction experiment in high school physics, Max D. Engelhart, Edward C. Schwachtgen, and Mary M. Nee—347
Detecting the Vanguard signal, Wallace A. Hilton and Roger C. Crawford—400
Evaluation of the Chicago experiment with televised physics instruction, Max D. Engelhart—200(A)
Explaining radio detection of the earth satellite, Wallace A. Hilton and Roger C. Crawford—129
Minimum satellite detection equipment, Wallace A. Hilton and Roger C. Crawford—371
Nature of Sputnik's radio signals, C. H. Moulton—202(A)
Physics TV program in the Chicago area, Edward C. Schwachtgen—132(A)
Teaching by television, W. McGrath—202(A)

Relativity
Clock paradox and the physics of discontinuous gravitational fields, C. B. Leffert and T. M. Donahue—515
Mnemonic device for relativistic particle kinematics, Frank S. Crawford, Jr.—376
On the paradox of the twins, Ralph Hoyt Bacon—502(L)
Relativistic clock experiments, E. T. Jaynes—197(L)
Vacuum electrodynamics on a merry-go-round, John Ise and Jack L. Uretsky—431

Reports, announcements, and news
Additional discussion, J. B. Gerhart, Boyd C. Mills, and D. C. Terry—270(T)
American Physical Society, Southeastern Section, Howard Carr—134, 504
Business meeting—270(T)
Colloquium of college physicists—187, 209
Electron microscope society of America—203
George Sarton Memorial Foundation, Inc.—435
International cooperation in physics—275
January meeting AAPT, report on, W. M. Pierce—200(T)
Michigan Association of College Physics Teachers, Paul Rood—270
Panel discussion: Clare Driscoll, Helen E. Hale, Bernard Kuder, Keith C. Johnson, and William H. Porter—270(T)
Physics in Hungary before and after 1945, Bela G. Kolossvary—50(A)
Present status of physics in West Germany, Lester I. Bockstahler—201(T)
Some characteristics of the literature used by *American Journal of Physics* authors, Mary W. Colmer and Sam Adams—397
Survey of support of research from 1926–1956, Dorwin L. Kilbourn—505(A)
Symposium on molecular structure and spectroscopy—174
Visiting professors in astronomy program—24, 351

Rockets
Effect of transverse atmospheric drag on satellite orbits, W. A. Wildhack—506(T)
Optimum pay-load-ratio relation for multiple-stage rockets, G. Leitmann—28
Physics of satellites and what can be learned from them, B. A. Jacobsohn—270(T)
Scientific aspects of the earth satellite program, S. F. Singer—270(T)

Secondary school physics
Chicago public schools television instruction experiment in high school physics, Max D. Engelhart, Edward C. Schwachtgen, and Mary M. Nee—347
Correlation of high school and college grades, G. K. Schoepfle and D. L. Arnold—419(A), 537
Do college students benefit from high school laboratory courses? Sanborn C. Brown—334
Experience with a science seminar organized by the Joe Berg Foundation in Arlington Heights High School, J. H. Haynsworth—506(A)
Experimental summer program for high school students, Don A. Edmonson—410(T)
Formation and administration of a physical science club, Roger W. Price—506(A)
High school level presentation of the indeterminacy principle, Rev. A. J. Mullen—506(T)
High school physics enrollments in the Chesapeake area, Bernard B. Watson—327
High school rocket clubs—how to run them safely, David W. Saltus—506(T)
Oak Ridge traveling science demonstration lecture program—204
Physics for secondary schools, Harold P. Knauss—378
Physics program in the Seattle public schools, L. S. Watson—507(T)
Relation of school and college physics, H. Craig Sipe—134(A)
Review and criticism of science and physics education in high schools, D. C. Terry—270(T)
Science teaching in the secondary schools. Local action and the individual, J. S. Coleman and R. N. Whaley—416(T)
Superior high school graduate and college physics, S. Winston Cram and L. I. Bockstahler—416(T)
Symposium on the teaching of high school physics, David Dennison—270(T)
Ways and means by which college physics departments can be of assistance to physics programs in the high schools, Lewis B. Buster, James A. Walter, and Charles A. Bowen—507(T)
Ways and means by which the high school physics program can be of assistance to that in the colleges, Martin E. Nelson, Hans Bichsel, and R. W. Kenworthy—508(T)
What can we do to help our colleagues in the secondary schools? C. Williamson—587(A)
What is the proper division of effort between high school and college courses in physics and chemistry? Vivian A. Johnson, John Williams, and Edward L. Haenisch—507(T)
What problems in science interest high school students today? J. Theodore Peters—585(L)

Social and economic aspects of science
Civilian applications of atomic energy, Paul McDaniel—134(T)
Science and society, John R. Dunning—134(T)

Solid-state physics
Activation energy for the surface migration of tungsten, P. C. Bettler—203(A)
Comments on "Electrostatic potential in crystals," Wayne B. Nottingham—33; Further comments, Earl Callen—34
Distribution of solutes between metallic phases, Leonard E. Olds—590(A)

Electron diffraction study of cuprous oxide, L. N. Hadley and Zoel Martinson—591(A)
Field emission patterns from germanium and silicon crystals, Richard L. Perry—203(A)
Imperfections in semiconductors, J. Kortright—507(T)
Paramagnetic resonance in electron irradiated crystals, J. A. Cowen—270(T)
Photoconductivity in the silver halides, F. C. Brown—201(A)
Solid state electronics, J. G. Glenn—587(A)

Sound
Acoustic behavior of a rubber string, Ira M. Freeman—369
Longitudinal waves in an elastic plate, E. Volterra and E. C. Zachmanglou—410(T)
Preferred frequencies of tuning forks—27
Wavelength of plane waves in a dissipative medium, and of spherical waves in a nondissipative and in a dissipative medium, Joseph W. Ellis—398

Teacher training
Analysis of the N.S.F. sponsored physics course at the University of Pennsylvania, Elmer L. Offenbacher—418(A)
Case Institute—General Electric summer program, L. O. Olsen—645(T)
Course in demonstrations, Frank L. Moore—419(A)
N. S. F. institute for high school teachers at the University of Michigan, Wallace W. McCormick—270(T)
Our contribution to the science teacher shortage, Robert J. Brummond—345(A)
Physics curriculum material for NSF summer institutes for high school teachers, Sherwood Githens, Thomas M. Hahn, Jr., Walter M. Nielsen, Eric Rodgers, and Paul E. Shearin—505(T)
Realistic view of supply and demand, Hugh Templeton—128
Some notes on the National Science Foundation summer institutes, Richard L. Brown—408(T)
Summer course in fundamentals of atomic energy for high school science teachers—138
Summer science institute at Marshall College, D. C. Martin—200(T); at Ohio University, J. T. Shipman—200(T)
Summer session course in demonstration experiments for high school physics teachers, Julius Sumner Miller—418(A)
The problem of certification and placement responsibility, W. A. Brown—507(T)
Training of college physics laboratory assistants—326

Testing, theory and techniques
Design of examinations and interpretation of grades, M. W. P. Strandberg—555
Distribution of scores in examinations of finite length, R. W. Christy—324
Evaluating laboratory instruction by use of objective-type tests, Haym Kruglak—31
Examination problem on Kepler's third law, Phillip R. Brieske—404(L)
Examinations control courses, Eric. M. Rogers—420(A)
How to test for important objectives in general physics, Leo Nedelsky—506(A)
Measuring our success, Leo Nedelsky—48(T)
Results of the competitive physics test, B. G. Kolossvary—587(A)
Visiting associateships in test development, summer 1958—47
Writing test exercises in the natural sciences, Leo Nedelsky—469

Textbooks
Book Review: *Analytical mechanics* by F. W. Van Name, Jr., George Barnes—597
Book Review: *Atomic physics and human knowledge* by Niels Bohr, Waldemar Noll—596
Book Review: *Basic physics* by A. R. Meetham, Sheldon Brown—650
Book Review: *Electrical discharges in gases* by F. M. Penning, D. J. Rose—651
Book Review: *Electrical measurements and their applications* by Walter C. Michels, R. W. McKay—343
Book Review: *Fundamentals of optics* by Frances A. Jenkins and Harvey E. White, Walter Eppenstein—272
Book Review: *H. A. Lorentz* by Dr. G. L. de Haas-Lorentz, Editor, L. C. Jackson—412
Book Review: *Mathematics and wave mechanics* by R. H. Atkin, William A. McKinley—597
Book Review: *Microwave measurements* by Edward L. Ginzton, C. L. Andrews—271
Book Review: *Physical science for liberal arts students* by Hugo N. Swenson and J. Edmund Woods, W. E. Haisley, Jr.—45
Book Review: *Physics* by John Stewart Marshall and Elton Roy Pounder, Mary R. Harbold—46
Book Review: *Principles of physical science* by Francis T. Bonner and Melba Phillips, R. A. Peck, Jr.—413
Book Review: *Progress in cosmic ray physics*, Volume III, by J. G. Wilson, Editor, W. B. Fretter—411
Book Review: *Radioactivity and nuclear physics* by J. M. Cork, Anthony A. Silvidi—343
Book Review: *Reason and chance in scientific discovery* by R. Taton, Nicholas Rescher—413
Book Review: *The calculation of atomic structure* by D. R. Hartree, Frank J. Blatt—135
Book Review: *The elements of classical thermodynamics* by A. B. Pippard, E. Creutz—651
Book Review: *The spectrum of atomic hydrogen* by G. W. Series, C. Zemach—598
Book Review: *Theoretical physics, thermodynamics, electromagnetism, waves and particles* by F. W. Constant, S. T. Epstein—598
Book Review: *Thermodynamics and statistical mechanics* by A. H. Wilson, Melville S. Green—599
Publications received—286, 430, 514, 600, 646, 652

Units, dimensions, and terminology
Astrostats in the high-altitude sounding program, R. A. Nidey—589(A)
Beware of the "glug," a new unit of mass, A. David—41(L)
"Deposition"—a proposed antonym for "sublimation," James E. McDonald—131(L)
Few more words about units, Robert L. Mooney—614
How many inches wide is one foot long? R. C. Hitchcock—408(A)
Nature of physical quantities, J. Gibson Winans—420(A)
New unit of mass? Cyrus G. Dunkle—503(L)
Observations in relation with a new system of units, M. Borneas—40
Search for fundamental length in physics, William McKinley—49(T)
Some considerations about the precision of the international standard of wavelength, Shang Yi-Ch'en—203(A), 464
Units and dimensions for the Hall coefficient, Warren J. Deshotels—401
Why not massor? L. Cintra do Prado—405(L)

Visual materials and methods
Ballistics laboratory, Harvey White—200(T)
Film loops to demonstrate standing wave phenomena, John J. Heilemann—50(A)
Filming of physics and how the teacher might use it, Owen R. Bliven—408(T)
Graphic aids for teaching Coriolis force, Marshall J. Walker—392
High school physics on film, Harvey White—270(T)
Introductory physics on film: Foreword to the reviews, Robert H. Randall—508; Introductory section, F. E. Throw—509; Section on special lessons, Robert L. Petry—509; Section on mechanics, J. Robert Billings, J. Bruce Davis III, Daniel T. Goldthwaite, Margery J. Kelz, Henry J. Krauser, Raymond W. Rowan, and Lee E. Wickline—510; Section on properties of matter, Rosalie C. Hoyt—511; Section on atomic physics, F. E. Throw—647; Section on heat, Robert L. Petry—592; Section on sound, Robert H. Randall—592; Section on light, J. J. Heilemann—595; Section on electricity and magnetism, Alan T. Wager—594; Section on electronics, R. H. Randall—648; Section on quantum optics, Rosalie C. Hoyt—649; Section on nuclear physics, F. E. Throw—649
Linear accelerator-British film, Robert H. Randall—419(A)
Mass education with films, Don Benzie—200(A)
Note on the use of the EBF-White physics film series, H. Craig Sipe—505(A)
Physics film strips: radiant energy, static and current electricity, electric current in gases and vacuum, Robert H. Randall—512
Short film describing the Shell Merit Fellowship program held at Stanford University this summer—270(T)
Teacher and student reaction to instruction by film, R. H. Randall—415(T)

X-rays
Compton effect with protons and x-rays from 300-Mev betatron, A. O. Hansen—201(A)
